1 Product Overview

Product Introduction

M10D is a product designed for movie LED display, which is independently developed and launched by Mooncell; it adopted the high-precision **120 PIN** connector; it can supports the maximum **32** groups of the parallel connection data; the maximum loading capacity could reach up to **512*512** pixels; with strong processing ability, supper reliability and high competitive price.

Product Features

- It features the small size and thickness, saving a lot more space for the narrow cabinet and space of the led strip(bar).
- It features high precision connector, which is dust-proof & shock proof; with high reliability and stability.
- Integrated network transformer to simplify the design and improve electromagnetic compatibility
- Support 12BIT video input
- It has an internal frequency doubling function that can multiply the movie format 3D 48HZ to 144HZ.
- Can control 3D glasses transmitter

Application Scenarios

It can be applied to LED movie display.

2 Function Introduction

Displaying Effect

<i>It supports pixel level brightness and Chroma Calibration</i>	<i>Using it with the Mooncell Calibration Software to calibrate each one of the pixels on its brightness and Chroma. It can effectively eliminate the Chromatic aberration so as to enhance its consistency of the brightness and Chroma to a high level and result in a better displayed effects.</i>
<i>Automatically switch display effects</i>	<i>Automatically recognize 24HZ or 48HZ video input and switch between different display schemes.</i>
<i>Support 12BIT</i>	<i>Support 12BIT video source input</i>
<i>Frequency doubling function</i>	<i>Double the frequency of 3D video in movie format from 48HZ to 144HZ</i>

Enhanced Operability:

<i>The Receiving Card is Supported to detect its own Sequence number</i>	<i>Using the Network Port testing function on Mooncell AutoLED Software, the receiving card serial number and the Network Port Information will be displayed on the target cabinet. Users will be able to get to know the locations of the receiving cards as well as its Connection diagram.</i>
<i>Data Port User-Defined is supported</i>	<i>Using it with the Mooncell AutoLED Software, you can detect and edit the output data of the receiving cards.</i>
<i>To build up a complicated cabinet is supported</i>	<i>On AutoLED Software, there is an 'Advanced Setting', from here you can quickly arrange or structure the</i>

	<i>modules at your option.</i>
<i>To structure a complicated Led Screen is supported</i>	<i>On AutoLED Software, there is a “Complicated Led Screen Connection”, from here you can quickly arrange or structure the cabinet modules on your option.</i>
<i>Intelligent Module is supported(Customized)</i>	<i>The Intelligent Module consists of Flash and MCU.The Flash can reserve the calibration data and information of the PCB Board. The MCU can be communicated with the receiving cards so as to detect the temperature, voltage and wiring connectivity of each module (on a module-level: module by module). With Intelligent Module, the monitor cards are not necessary for the Monitor Users, which means you can save a lot more space on the cabinets.</i>
<i>Module Self-Calibrated is supported(Customized)</i>	<i>When a module is replaced, the receiving card will automatically read the ID and its calibration data of the new one once the electricity power is connected, and the data will be reserved to the Flash.</i>

Hardware Stability

<i>Ethernet Cable Backup(Hot Backup)</i>	<i>The main cable will be having the loop connection. If there’s one cable breaks then still there will have another one to make sure the led display work properly.</i>
	<i>Dual receiving cards backup is supported(Dual Circuit backup design) Customized :when the main</i>

	<p>working receiving card fails, the other one (backup) will take its job to keep the led display working properly.</p>
--	---

Smart Software and Hardware Stability

<p>It supports to detect the error rates of the network cable</p>	<p>On the Mooncell AutoLED Software, you can detect the network cable connectivity in real time to tell the condition of the network cables, so that you can get rid of any errors immediately.</p>
<p>Communication Monitoring Function</p>	<p>On Mooncell AutoLED Software, you can monitor the Working Status of the receiving cards in real time.</p>
<p>Dual Power Supplies Backup is supported</p>	<p>2 Power Supplies can be connected simultaneously and the working status can be detected. Whenever there's a power supply failure, it can be detected, the system then will automatically decrease the brightness of the led screen so that it can still keep working properly</p>
<p>LCD Module is supported(Customized)</p>	<p>The LCD Module can be connected to the HUB board to display the temperature, voltage, single running time and total running time of the receiving cards.</p>
<p>It supports to detect the voltage</p>	<p>It will detects the voltage status of the receiving cards.</p>
<p>It supports to detect the temperature</p>	<p>The operating temperature of the receiving cards could be detected.</p>
<p>It supports to detect the power status</p>	<p>The power status of the power supplies could be detected.</p>
<p>It supports the reset function</p>	<p>Once the online upgrading finished, it could automatically reset the hardware.</p>
<p>Support LCD module (customized)</p>	<p>The liquid crystal module is connected to the HUB board and is used to display the temperature, voltage, single running time and total running time of the receiving card.</p>

3 Product Parameters

Basic Parameters

<i>RGB Parallel</i>	<i>The Maximum Loading Capacity(Pixels)</i>	<i>Loading Capacity After lightness Calibrating (Pixels)</i>	<i>Loading Capacity after Color Calibrating(Pixels)</i>
<i>32 Groups</i>	<i>512*512</i>	<i>512*512</i>	<i>384*512</i>

<i>Single Network Pot Cascading Quantity</i>	<i>Scanning Lines Supported</i>		
<i>≤1000PCS</i>	<i>1-64 Scan</i>

Precautions

1. *The testing (debugging) and installation should be done by the qualified professionals*
2. *Anti-Static, Water-Proof and Dust-Proof Required*
